EVRM-NA *series*

Solenoid safety valves for gas

Manual reset - Normally open

The EVRM-NA type valve is a manual reset safety valve that is normally open. This type of device, connected with one or more gas leakage detectors or alarm signals for the presence of carbon monoxide, is suitable for performing locking operations on the gas line.
The EVRM-NA type valves are made in accordance with EN161 standard (when applicable). All models are conforming with the European Directives 89/336 EEC and 73/23 EEC.

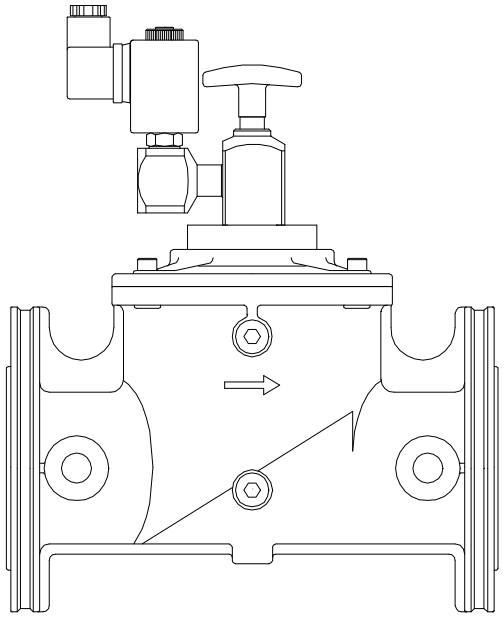
Features

- Large range for inlet/outlet connections, from 3/8" to 6" pipes sizing.
- Provided with G1/4" pressure gauge on two sides in the inlet pressure chamber (except brass models). Others gauge points on request.
- Optional G1/8" connection for closed position indicator micro switch (on request from 3/4" to 6").
- Fine mesh filter incorporated to prevent dirty contamination of the seal seat (except brass models).
- Maximum operating pressure 500 mbar.
- Suitable for air and non-aggressive gases (1, 2 and 3 families).
- Coil insulation is class H (180° C).
- Terminals with DIN plug and PG connector.
- Valves are 100% tested by computerized testing machineries and are fully warranted.
- For valve identification see the following charts.

WARNING

This control must be installed in compliance with the laws in force.

Read instructions before use.



EVRM-NA8

Technical specifications

Connections	f/f Gas threaded ISO 228/1 from Rp 3/8" to Rp 2" Flanged PN16 – ISO 7005 from DN65 to DN150
Voltage rating	230 Vac 50/60 Hz 110 Vac 50/60 Hz 24 Vac/dc 12 Vac/dc
Voltage tolerance	-15% / +10%
Power consumption	see charts
Environment temperature ...	-15° C/ +60° C
Max. working pressure	500 mbar
Flow capacity	see charts
Seal	NBR
Closing time	< 1 sec.
Protection class	IP 54
Cable gland	PG09
Overall dimensions	see charts

Operation

The EVRM-NA type valve is a manual reset safety valve that is normally open. A manual operation is therefore necessary to open the valve and set the mechanism consenting to maintain this state. The powering by means of line current and/or condenser discharge, induced by the leakage detector, causes tripping of the mechanism and consequent closing of the gas passage. If energizing of the sensor persists due to the presence of gas, the valve remains under power and does not allow reset. When the causes for locking have been eliminated, valve must be opened manually.

Accessories

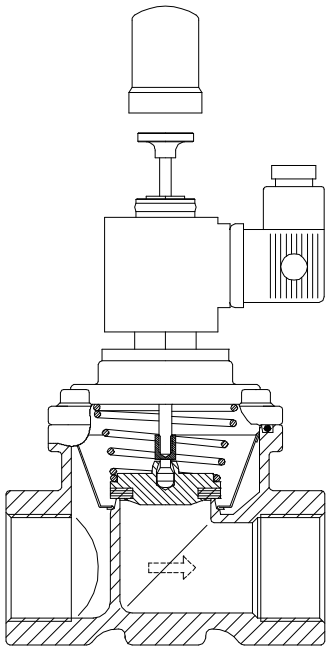
A fine mesh filter is provided, to prevent dirty contamination of the seal seat. However, an external strainer must be installed upstream of the valve. Brass models are available without internal filter only.

Inlet pressure area is provided with bilateral G¼" gauges, to connect min/max adjustable pressure switches, leakage tester or other gas equipments. On request are available gauges in outlet area from DN32 model to DN50. These are standard from DN65 to DN150. Brass models are available without gauges only.

On request, valves are supplied with a G1/8" connection on the bottom, to installed a closed position indicator micro switch (from 3/4" to 6"). An adapting rod is provided too.

Coil features

Coil and DIN plug are provided with suitable gaskets, to avoid water and dirty contamination (see the *Service Instruction Section*).



EVRM-NA3

General information

Avoid overtightening and mount tension free.

All components are design to withstand any mechanical, chemical and thermal condition occurring during typical service.

An effective impregnation/heat treatment has been used to improve mechanical sturdiness, sealing and resistance to corrosion of the components.

Valves are suitable for use with air and non-aggressive gases included in the 1, 2 and 3 families (EN 437).
For special applications ask the *Corrosion Chart* showing the compatibility of materials with fluids.

Materials used:
Aluminium
Brass
Cast iron
Stainless steel
Nitrile rubber (NBR)
Ethylene propylene (EPDM)
Viton™
PTFE (Teflon™)

Note: the chart is for general recommendation only.

Valve installation

Verify the line pressure is lower of the maximum working pressure admitted to the valve.
Check correspondence of flow direction with arrow printed on valve body. Check correct alignment of connecting pipes and allow enough space from the walls to allow free air circulation.

Make sure no foreign body is entered into the valve during handling.

Threaded models:

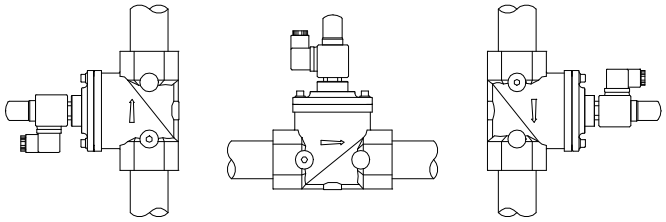
1. Put sealing agent onto the pipe thread (avoid excessive quantities of fittings glue which could enter in the valve and damage the seal seat).
2. Screw the pipes using proper tools only. Do not use unit as lever because damage to the valve stem could result.

Flanged models:

1. Position the gasket and insert the bolts.
2. Screw the nuts tightening them crosswise and using proper tools only.
3. Avoid overtightening and mount tension free.

Valve may be mounted with coil in horizontal or vertical position. Coil may be oriented 360 degrees in any direction.

Install in an area that is protected from rain and water splashes or drops.



CAUTION

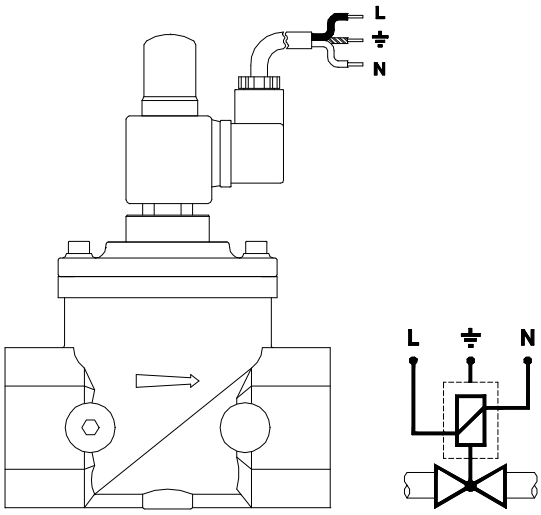
Do not dismount or tamper with the resetting mechanism (void warranty).

Electrical connections (IEC 730-1)

Check correspondence between valve voltage rating and line power supply, before making any electrical connections.

1. Switch off power supply and remove protection cover.
2. Connect power cables to rectifier circuit terminal board.
3. Screw back the box cover, taking care to use all gaskets properly, because this could condition the valve life duration.

In case of 12V or 24V power supply, if it is rectified or direct, connect with entries "+,-". Do not reverse the polarity.



EVRM-NA6

WARNING

- **To prevent product damage and dangerous situations, read the Installation and Service Instructions carefully.**
- **Turn off all power before servicing any part of the system.**
- **Perform leak and functional tests after mounting. A gas leak detection spray may be used also.**
- **Coil and DIN plug must be replaced with identical spare parts only.**
- **If the coil is turned, make sure the cap is properly tightened and the coil is locked.**
- **Use all gaskets properly (void warranty).**
- **All wiring must be in compliance with local and national codes.**
- **Make sure all works are performed by qualified technicians only.**

Contact Elektrogas selling place or manufacturer for any question about Installation, Operation and Maintenance.
